

Crack Filler Equipment Rental

Applying CA-90 (EC-101) crack filler can be an attractive option for many municipalities looking to perform pavement maintenance on cracks which are greater than 5mm in width while utilizing existing staff. Unlike the hot pour crack process, our crack filler does not pose a significant safety risk and can be applied easily with minimal training. We offer both weekly and monthly equipment rental rates along with multiple pickup locations. Materials are available for purchase in bulk or 1000kg totes.

What you need?

- Truck capable of pulling a loaded trailer that weighs approximately 3500 kg (7800 lbs)
- Labour for application recommended 2-4 staff.
- Ability to limit traffic access on freshly applied crack filler.
- V shaped squeegee for spreading the applied material into the cracks

Optional:

- Portable air compressor for cleaning loose debris from cracks
- Blotter sand
